

STANISLAV BARABANOV

Product designer

web: barabanovdesign.ru telegram: [@barabanov_s](https://t.me/@barabanov_s) mail: barabanov.design@gmail.com

about 8 years in design, including 6 years in product design. I design systems with complex business logic and large data volumes: tables, directories, analytics, and role-based access. I have launched products from scratch and evolved mature platforms. I take solutions to clickable prototypes independently, without waiting for development. I use AI for hypothesis discovery, research, and development.

work GRINATOM (ROSATOM IT DIVISION) / Lead Product Designer

February 2025 - July 2026

- Enterprise product for payroll calculation, tax accounting, and HR administration.
- Designed new scenarios and enhanced processes with branching business logic and regulatory requirements
 - Rebuilt the section for interaction with the Social Fund of Russia, aligning 6 modules around consistent patterns
 - Designed 20+ directories, from simple lists to multi-level structures with filtering and entity relationships
 - Tailored interfaces to different roles - employees, HR, and HR administration - with different data scope and access rights
 - Designed workflows for large tables and multi-step forms
 - Established input validation and error-handling logic
 - Evolved the product design system
 - Conducted design reviews and supported implementation through release

SATEL PRO / Senior Product Designer

February 2025 - July 2026

- Enterprise product for payroll calculation, tax accounting, and HR administration.
- Designed new scenarios and enhanced processes with branching business logic and regulatory requirements
 - Rebuilt the section for interaction with the Social Fund of Russia, aligning 6 modules around consistent patterns
 - Designed 20+ directories, from simple lists to multi-level structures with filtering and entity relationships
 - Tailored interfaces to different roles - employees, HR, and HR administration - with different data scope and access rights
 - Designed workflows for large tables and multi-step forms
 - Established input validation and error-handling logic
 - Evolved the product design system
 - Conducted design reviews and supported implementation through release

EQVIO / Product Designer

May 2020 - February 2024

- B2B platform for corporate learning, communications, and employee engagement. 350+ client companies, including Ozon, MTS, MegaFon, Nestle, Henkel, L'Oreal, and Kärcher.
- Redesigned the web platform
 - Systematized the design system across three platforms: admin panel, web, and mobile app
 - Created an app branding template for clients' visual identities, reducing build preparation time by 52%
 - Designed 6 new sections and 50+ features for web and mobile
 - Presented solutions at product demos

EQVIO / Graphic Designer

July 2018 - May 2020

Created product identities and visual systems, marketing materials, presentations, website graphics and animation, and layouts in close collaboration with developers.

skills Product design: scenarios, information architecture, user flows, CJM, JTBD, prototyping
Complex interfaces: tables, directories, filters, multi-step forms, role models, analytics
Design systems: Atomic Design, variables, JSON, UI kits, web and mobile, Material Design, HIG
AI at work: prototyping and front-end implementation with coding assistants, research, data analysis. Built my portfolio website independently

tools Figma, FigJam, Miro, Jira, Confluence, Codex, Claude, GitHub
